Bantam Tool

Bantam Strapping Tool

Ratchet Tool

304/Strap

An 18-8 chromium-nickel stainless steel strapping used for insulation banding, cable bundling and other lightweight applications requiring excellent corrosion resistance.

Bantam Tool C075

The Bantam Tool C075 is designed for use in light duty banding applications such as insulation, cable bundling, and sign hanging. With the unique 3-way handle, the Bantam Tool can be used in the pistol grip position for one-handed tensioning, or in the other positions for two-handed tensioning. It is especially useful in tight areas with minimal access such as in cable bundling aboard ships. The Bantam Tool is a compact, lightweight, ratchet action tool with a built-in cutter. It has been designed for easy loading and removing of material, and is zinc plated for corrosion resistance. Tension release levers have been incorporated into the tool design for situations requiring repositioning of the band after tensioning has begun.

Bantam Strapping Tool C085

The Bantam Strapping Tool C085 is a less expensive version designed for light duty strapping applications on flat surfaces with minimal access. It has been designed for quick take-up and tensioning, and is self-contained, requiring no extra tools to complete the clamp.

C400 Ratchet Tool

Heavy duty windless type tensioner for 3/8 to 3/4 stainless steel as well as carbon steel banding in thickness up to .030". Highly portable, fast, reliable ratchet type tool. For sign hanging, insulation work, general applications and other banding applications.
